MATTHEW ZOLP

Salesforce Technical Architect

Software Architect driving enterprise Salesforce architecture, DevOps automation, and AI-assisted development tooling on large-scale federal programs at the Department of Veterans Affairs. 23x Salesforce Certified — including System Architect, Application Architect, OmniStudio, MuleSoft, and Public Sector Solutions. Proven track record of scaling teams from 20 to 100+ contributors, building CI/CD infrastructure from the ground up, and pioneering AI-augmented quality assurance tooling that elevates delivery across entire development organizations.

SKILLS & CERTIFICATIONS

Technical Skills

- **Salesforce Platform:** Apex, Lightning Web Components (LWC), Aura, Visualforce, OmniStudio, Core Platform
- **Architecture & Design:** Enterprise Architecture, Integration Architecture, Data Architecture, Identity & Access Management, Apex Frameworks, Dependency Injection, Stubbing/Mocking
- **DevOps & CI/CD:** Salesforce DX, Copado, GitHub Actions, Jenkins CI, Scratch Org Automation, Static Code Analysis
- **Integration:** REST API Design & Development, MuleSoft, API-Led Connectivity
- **AI & Tooling:** GitHub Copilot, AI-Powered DevOps Tooling
- **Languages & Web:** Apex, JavaScript, HTML/CSS, Visualforce
- **Methodologies:** SAFe/Agile, SDLC Management, Test-Driven Development

Certifications — Salesforce (23x Certified)

- **System Architect** — 2023
- **Application Architect** — 2020
- **Integration Architect** — 2023
- **Identity & Access Management Architect** — 2023
- **Data Architecture & Management Designer** — 2020
- **Platform Developer II** — 2020
- **JavaScript Developer I** — 2024
- **MuleSoft Developer II** — 2025
- **OmniStudio Developer** — 2024
- **Development Lifecycle & Deployment Designer** — 2021
- **Copado Fundamentals I & II** — 2023
- + 13 additional Salesforce certifications

EXPERIENCE

Software Architect (Salesforce) | Booz Allen Hamilton

Aug 2025 – Present | Oshkosh, WI

- Designated as ART-level Technical Lead — the program's highest individual technical authority — providing architectural guidance to Technical Leads and developers across multiple teams on a major VA federal program
- Architected an automated scratch org pipeline that transformed a multi-hour manual setup into a single-command experience, successfully provisioning 328+ scratch orgs to date
- Created an AI-powered Code Review Agent leveraging GitHub Copilot to standardize quality assurance across every pull request, including acceptance criteria validation and architecture documentation gap detection
- Drove key contributions to the CI/CD infrastructure used daily by the entire development organization — build validation, static analysis, automated deployments, and merge queue management
- Codified reusable development patterns (Repository Pattern, Stubbing/Mocking, Dependency Injection) adopted as team-wide standards
- Enforced a 90% Apex test coverage threshold and integrated static code analysis into the CI pipeline, catching violations before code reaches main
- Conducted 513+ pull request reviews, delivering architectural guidance and ensuring adherence to standards at scale
- Serve as direct liaison between the development team and the DTC, ensuring compliance with architectural requirements and release processes across a hybrid Salesforce DX/Copado pipeline
- Maintain the comprehensive Design Architecture document as the single source of truth for the system
- Contribute production Apex code across feature development, bug resolution, and test infrastructure
- Mentor Technical Leads and developers, fostering a culture of shared ownership and continuous improvement

Lead Engineer (Salesforce) | Booz Allen Hamilton

Apr 2022 – Aug 2025 | Appleton, WI

- Served as Lead Developer on a team of 80+ contributors, delivering a complex Health Cloud implementation using custom LWC and Apex frameworks to virtualize external data sources through mature API services
- Designed and delivered a comprehensive scheduling solution leveraging OmniStudio, Lightning Web Components, Apex, and API-led development practices, enabling healthcare administrative professionals to create and manage appointments for Veterans
- Oversaw the transition of a complex scheduling solution into an Unlocked Package, making it installable across multiple Salesforce orgs within the client's infrastructure
- Resolved 48 production issues in a single year while serving as a cross-functional SME on the Production Sustainment team
- Guided the delivery team through complex release challenges, proactively designing against API specifications ahead of backend availability — saving significant time and eliminating costly rework

Salesforce Technical Lead | Liberty IT Solutions (acquired by Booz Allen Hamilton, 2022)

Apr 2021 – Apr 2022 | Appleton, WI

- Led DevOps operations for a team of 25+ technical consultants, developers, and architects in a complex enterprise Salesforce implementation using Unlocked Packages, Jenkins CI, GitHub Actions, Scratch Orgs, and Salesforce DX
- Managed package state and versioning across seven pipeline environments, each with specific versioning and release process requirements
- Synchronized development across multi-release/parallel workstreams to ensure downstream package stability using Salesforce DX
- Facilitated the adoption of Copado and architected a multi-release strategy that operated within the tool's pipeline configuration limitations
- Communicated with the client's DevOps strategy team to identify cross-project dependencies and packaging requirements
- Ensured adequate test coverage for deployment by advising on and developing against the project's unit testing infrastructure

Salesforce Administrator/Developer | Jewelers Mutual Insurance Group

Aug 2018 – Apr 2021 | Neenah, WI

- Served as lead Salesforce Developer and Administrator in a multi-cloud Salesforce implementation, translating business requirements into integrated, high-performing custom applications
- Designed, programmed, tested, and deployed multiple custom REST API integrations, including a Salesforce-to-Salesforce sync using advanced probabilistic matching algorithms and confidence scoring to ensure data integrity
- Built a Salesforce-hosted ETL tool retrieving data from Google BigQuery SQL tables and loading them into Salesforce as sObject records, leveraging Custom Metadata Types for extensibility
- Architected a custom file foldering system using LWC — object and record-aware — enabling users to categorize and store files with dynamic visibility controlled by custom permissions
- Administered the SDLC, performed static code analysis, and scheduled 500+ successful deployments
- Integrated lead capture forms into a Drupal-hosted website using iframes, Visualforce, jQuery, JavaScript validation, Apex, and reCaptcha authentication
- Maintained 99% average Apex test code coverage across the codebase
- Established team standards for test class coverage, OOP/bulk design patterns, and trigger frameworks

Urdu Cryptologic Linguist / Signals Intelligence Operator | United States Marine Corps

Sep 2013 – Aug 2018

- Served as a Cryptologic Linguist and Signals Intelligence Operator with a focus on Urdu language operations

EDUCATION

Bachelor's Degree, Business Administration and Management | Colorado Technical University

2016 – 2018

Associate of Arts, Urdu | Defense Language Institute Foreign Language Center

2014 – 2015

Salesforce Administration/Development | Salesforce Military

Trailhead Military — Job training and career accelerator program for military service members, veterans, and spouses
